David design

This is not an usual chair...

Hammock is produced in vegetable tanned leather that will last for long time. It is tanned in a vegetable way without any use of chemicals or chrome. You will get an fantastic patina as years goes by and you can with advantage use a leather balm (available at David design dealers) to keep the leather soft and to be simpler to clean. You keep the mat surface and leather balm even gives the leather it's fragrance back.

If you want to clean the leather you shall use a leather soap. Even this is available at David design dealers.

Leather is stretching and conforms to users. Because of that Hammock have two straps under the seat to stretch the leather and keep the best comfort.

As all David design furnitures is Hammock proudly produced in Sweden for the best care of environment, sustainability, people and economy. We hope you will enjoy your David design furniture for long time.
